PRODUCT DESCRIPTION

TCG40 Series offers maximum durability & protection.

FEATURES AND BENEFITS

Ultralight fabric.

Arc Flash Thermographer gloves are manufactured of fabric that has been tested according to ASTM F1959 to provide protection against the heat energy of an Arc Flash incident. Like the Arc Flash garments that are used in this application, the fabric is Flame Resistant and provides some level of insulating protection against the arc flash energy. Again, like the Arc Flash suits, they are rated to reflect the level of protection offered.

IFR= INHERENTLY FLAME RESISTANT fabric, has a flame resistant quality built right into the fiber. The resistance to flame is a fundamental characteristic or quality of the fabric. It cannot be removed or washed out.

SAFETY A FAMILY TRADITION SINCE 1978

Oberon was founded in 1978 by Jack Hirschmann to offer a personal protection line of products. It began with the creation of the innovative Face-Fit® face shield. This design ushered in the idea that face shields could be made to protect the user from specific and unique hazards. Later, Oberon was approached by NASA to create a solution to the blinding effects of UV radiation during early space flights. Preliminary tests demonstrated goggles would be too bulky to be worn inside helmets, so a thin layer of gold was applied to the astronaut's visors. This technology gave rise to Oberon's "Gold Shield" and was found to be useful in space, but also provided solutions for radiant heat hazards in the workplace commonly found in foundries and steel mills.

In 1985, Oberon invented the first Arc Flash face shield. This idea started with a phone call from an electric utility, which had experienced arc flash burns on their meter installers. The utility needed a way to protect their workers while allowing them to perform common electrical work tasks. Oberon answered the call and eventually created the first arc flash suit.

The idea has now grown into an industry providing comprehensive safety for electricians, linemen and contractors across utilities, industry and municipalities around the world. Over the last 30 years Oberon has continued to learn about the electrical safety business and the need for solutions in many different places around the world. With the implementation of rules and regulations like NFPA 70E and CSZ Z462 related to safety in the workplace, Oberon has sought to develop a comprehensive offering that would adhere to these guidelines and protect workers while performing common work tasks.

The innovation continues today with invention of our True Color Grey (TCG™) Arc Flash Face Shields. With Oberon's TCG™ nearly clear face shield design the user can now see all the colors of the wires they are working on. This unique design solved an age old problem for electrical workers and also created a new industry standard that has raised the bar for all manufacturers in the industry today.

OUR ROOTS

Oberon is not just a manufacturing company, we are an engineering company that develops innovative electrical safety solutions. We participate on many national standards committees and have a team of experts who strive every day to improve our Arc Flash PPE product line. At Oberon it is our mission to protect the welfare of the individual while adding value to a company's overall safety program.

Oberon is an **ISO 9001** accredited manufacturing facility and is actively involved in the **ASTM and ANSI Standards** development process as participating members on several technical committees. All of Oberon's products have been manufactured in accordance with every applicable Standard. Not only does Oberon help write these Standards, we lead by example in our research, product development, laboratory testing and manufacturing processes.

NFPA 70E and CSA Z462 Standards

The National Fire Protection Association and the Canadian Standards Association address the required elements of corporate electrical safety program, including training, engineering controls, work methods, and ultimately the personal protective apparel as the last line of defense for worker safety.

European Standards

The European Economic Area or EAA has standards for health, safety, and environmental protection. All products sold into the EAA must meet these standards and should be CE marked by the manufacturer to signify these European Standards are met.

ANSI Standards

The American National Standards Institute oversees the development of voluntary consensus standards for products, services, processes, systems, and personnel.

ASTM Standards

The American Society of Testing and Materials (ASTM) F18 Committee has developed standards covering the manufacturing, testing, care and use of arc flash PPE. Oberon's products have been certified using the most current version of every applicable ASTM testing standard and are in compliance with the overarching performance standard, ASTM F1506.

ARC FLASH PERSONAL PROTECTION (PPE) CATEGORIES

The National Fire Protection Association (NFPA) uses four Arc Flash PPE Categories to classify ranges of arc flash hazards, and the corresponding requirements for PPE. The categories are one of the methods used in the current NFPA 70E standard to inform workers about the protection they need while working on energized equipment.

Each category includes a minimum arc rating value for the required PPE. This value is determined by the PPE manufacturer, and indicates the protection provided by the equipment (in cal/cm²) as the point where a worker would have a 50% probability of receiving a 2nd degree skin burn.

PPE CATEGORY 1	Arc-Rated Clothing • AR long-sleeve shirt and pants or arc-rated coverall • AR face shield or arc flash suit hood • AR jacket, parka, rainwear or hard hat liner Protective Equipment • Hard hat • Safety glasses or safety goggles • Hearing protection • Heavy-duty leather gloves • Leather footwear	MINIMUM ARC RATING 4 CAL/CM²	
PPE CATEGORY 2	Arc-Rated Clothing • AR long-sleeve shirt and pants or arc-rated coverall • AR rated suit hood or arc rated face shield & balaclava • AR jacket, parka, rainwear or hard hat liner Protective Equipment • Hard hat • Safety glasses or safety goggles • Hearing protection • Heavy-duty leather gloves • Leather footwear	MINIMUM ARC RATING 8 CAL/CM²	
PPE CATEGORY 3	Arc-Rated Clothing • AR long-sleeve shirt, pants, and hood or arc rated coverall and hood • AR suit consisting of hood, coat, bib overalls, or hood & coveralls • AR gloves • AR jacket, parka, rainwear or hard hat liner Protective Equipment • Hard hat • Safety glasses or safety goggles • Hearing protection • Heavy-duty leather gloves • Leather footwear	MINIMUM ARC RATING 25 CAL/CM²	
PPE CATEGORY 4	Arc-Rated Clothing • AR long-sleeve shirt, pants, and hood or arc rated coverall and hood • AR suit consisting of hood, coat, bib overalls, or hood & coveralls • AR gloves • AR jacket, parka, rainwear or hard hat liner Protective Equipment • Hard hat • Safety glasses or safety goggles • Hearing protection • Heavy-duty leather gloves • Leather footwear  *Energized electrical work over 40 cal/cm² requires an incident energy analysis to be performed. Once this analysis has been done the appropriate PPE can be selected from the chart above by matching the calculated incident energy level with the corresponding PPE.	MINIMUM ARC RATING 40 CAL/CM²

MEASURING INSTRUCTIONS

1. Use a Fabric Measuring Tape

Chest: Measure around the chest just under the arms and across the shoulder blades.

Waist: Measure around the natural waistline.

Height: Measure the total height of the worker. You can tape one measuring tape to a wall and have the worker stand up straight against it.

Worker Body Measurement:

The worker's actual measurements determined using a fabric measuring tape.

Coat, Bibs & Coverall Measurements:

Garment dimensions are larger than the user's measurements to allow space for movement.

2. Select the Size

After measuring the worker select the size using the tables above. Each of these numbers represent the maximum measurement per size. Always round up and use the larger of either Chest or Waist.

3. Select the Height

All suits are sold as a Regular size. Order bib-overalls for adjustable height. Short, Tall and Extra Tall sizes are custom Made to Order. Regular Standard size is 5'10" to 6'1". Workers under 5'8" or over 6'4" need custom sizes.

True Color Grey is a medium density filter that allows all visible light to pass through without causing any color distortion.

Our patented TCG™ Technology has finally solved the biggest issue electricians face when wearing appropriate Arc Flash protection. Historically, they have always experienced color distortion when looking through their protective shields.

The end result is a nearly clear experience for the worker when performing electrical tasks. With the advent of this new technology electrical workers will no longer struggle to see colored wires or electrical tape while working energized.

What protection do Rubber Insulating Gloves provide?

Rubber Insulating Gloves are designed and constructed to act as a barrier between the user and the energy/voltage, to insulate the user from electric shock. The ASTM D120 standard outlines the protection that the glove provides. The rubber gloves are thicker as their protection increases. The rubber gloves will provide protection against either Alternating Current (AC) as well as Direct Current (DC), up to the levels detailed in the standard as well as typically on the labeling, which is required to be affixed to each glove. It is important NOT to exceed the USE voltage detailed to avoid injury.

GLOVE MEASUREMENT GUIDE

- A. HAND CIRCUMFERENCE
B. HAND LENGTH

**MEASURING INSTRUCTIONS**

1. Measure around the hand at the fullest part.
2. Measure from the tip of the middle finger to the base of the hand.
3. Use the LARGEST of these two measurements for the correct size glove.
4. The number of inches/centimeters measured equals the size of the glove.
